

User Management Pack **365**

Hybrid Cloud Simplicity

User Management Pack™ 365

User Management Pack™ 365 is a powerful software application that simplifies user lifecycle and identity management across Microsoft Teams and Skype for Business deployments.

User Management Pack 365 is built to intuitively sit on top of existing Microsoft Teams, Skype for Business Online or Skype for Business Server solutions, connecting the enterprise environment with Microsoft Office 365 or the hosted platform through specialized “connectors”.

User Management Pack 365 empowers IT departments by fully automating all unified communications, collaboration and meeting policy strategies across Microsoft Office 365 application deployments (Microsoft Teams, Skype for Business, SharePoint and OneDrive) and linking them with the corporate Active Directory policies. It also facilitates a gradual and fully controlled migration to Cloud PBX from any current Microsoft Teams or Skype for Business deployment.

In private cloud environments, User Management Pack 365 connects to the customer's Active Directory and serves as a self-service portal providing enterprise administrators with role-based control over their users' lifecycles.

The Quick Connect feature gives service providers a simple and fast way to add new customers. It also enables the configuration of AudioCodes SBCs and the Microsoft Office 365 tenant in just a few minutes, without entering CLI commands or resorting to PowerShell.

User Management Pack 365's powerful, yet simple web portal makes your Microsoft Teams or Skype for Business operation more cost-effective by replacing the need for multiple management tools such as PowerShell, admin centers and all the attendant on-staff ninjas. It also improves security by preventing obsolete accounts from gaining unwanted access. In Microsoft Teams environments, User Management Pack 365 allows IT managers to view and configure all voice routing policies, PSTN usage, normalized rules and dial plans.

Easily create or import users

Provision cloud or on-premises user voice attributes

Single pane of glass across all deployment models

Simplify moves, adds and changes

Reduce need for PowerShell ninjas

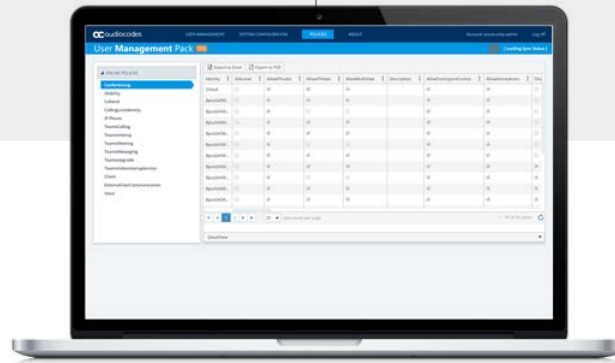

Ideal for service providers, system integrators and IT professionals

Benefits and Features

- Simple to use web-portal user interface
- Automates user lifecycle management entirely
- Provides full control over all Microsoft Teams, Skype for Business, SharePoint and OneDrive user modalities, including Office 365 Cloud PBX users
- UI for online voice routing and PSTN usage management
- Installation from Azure Marketplace
- Administrator privilege flexibility
- Increases productivity of IT staff
- Lowers the TCO of Microsoft Teams and Skype for Business operations
- Reduces the requirement for advanced training courses
- Simplifies the setup of hybrid voice over the Office 365 connector
- Makes migration of users to Cloud PBX (Office 365) very easy

- Multi-tenant solution for service providers and system integrators
- Audit and roll back historical changes
- Manage the Direct Inward Dialing (DID) range, including assignment of the next available number (from range) and reserved number option
- Quick Connect feature that allows service providers to add new customers quickly and easily
- Improves security
- Straightforward to revoke user client certificates
- Provides clear demarcation between the customer environment and the Microsoft Teams or Skype for Business setup
- Enables identity management over multiple forests

AudioCodes User Management Pack 365

	User Management Pack 365
Microsoft Teams/ Skype for Business Environment	On-premises, hybrid and Cloud PBX
Centralized Management	✓
